No.855-0208(E)

Notice of Change in Protective Structure of Hoist

Thank you for selecting a Mitsubishi hoist and related units. This letter is to notify the change in the protective structure of our hoists.

1. Description of Change

Our hoists are partially improved to increase the environmental resistance. The protective structure, therefore, will be changed as follows:

Existing products : Equivalent to JIS C 4004 drip-proof type (simplified outdoor type)

After change : Simplified outdoor type (equivalent to JIS C 0920, IP44)

* Attach a rainproof cover, or prepare a rain preventive place to use this product out of door.

After structural change, the model nameplate (to be affixed to the control box) will be changed as follows (example of nameplate for S-series hoist):

2. Corresponding Models

- R series, UR series, S series, U series, HU series ... for all capacities

3. Schedule for Change

For both the standard products and special products, change will be implemented in September 2005.

4. Compatibility between New and Old Products

We have improved our hoists while putting importance on compatibility. However, we are afraid that the new oil plug of the speed reducer cannot be used for the old products. We will, therefore, continuously provide old parts.

Model	Existing product (old product)	After change (use of new product)
S and U series (5-ton class or less)	Oil plug (part number: 03H27F) Service handbook A-9 (Part ⑩)	The part number is newly set (informed later). Since the casting shape is subject to change, <u>the new plug cannot be used for the old product.</u>
